

# hr.dat.compare

Tool for comparison of SAP®/HCM results

[www.gasparin.at](http://www.gasparin.at)

# Effective checking of your HCM results

**The comparison tool [hr.dat.compare](#) reduces the development and maintenance costs of your SAP® / HCM system with minimal effort.**

It enables a time-saving comparison of payroll and time management results within a client or across systems / clients. Rapid debugging and over-testing of your results after recording SAP®/HR Support Packages, SAP®-release changes and during implementation of company-specific or legal changes - efficiently and easily. Due to the simple application, the tool can be used directly in the HR department.

## Functionality

- compares payroll and time management results in single or mass tests, across systems or clients
- selection of different wage types, time wage types, etc.
- offers a convenient online comparison by means of split-screen editor
- archives comparison objects
- Filtering and restoring comparison results possible

## Availability

- System environment: SAP®-R3 available for Releases 4.70, ECC 500, ECC 600 (incl. all EhPs), SAP S/4HANA®

The complete tool is implemented in ABAP and supported by detailed documentation.

## Your benefits

---

### **Split-Screen-Functionality**

enables a convenient and fast online comparison of the data

### **Tracing of corrections**

the comparison lists can either be stored in the system or printed or written to a PC file

### **Error identification**

In the test system, the payroll results can be accounted and compared until the results are correct

# Individuality (put) in a nutshell

## Compare separately or in bigger units

Any number of people are possible in one run

## Across systems and clients

Compare in the same client or across systems

## Comparison of anonymized data

possible with original data, without giving a name
