

hr.dat.copy

Data transport tool for SAP®/HCM

www.gasparin.at

Efficient transport

of your personnel data

With the data transport and copy tool `hr.dat.copy` you can use the data of any number of representative people of the productive system as data for test or training systems.

From the HCM system, representative people with different employee groups or groups, personnel areas etc. are selected and transported to the desired system with `hr.dat.copy`. If necessary, you can anonymise and customize personal data consistently or individually. In addition, the objects of the PD, such as the organizational structure, training / events, qualification catalogs, certain or all objects of a plan variant, and much more can be transported.

Functionality

- copies the data in the same client under different personnel numbers
- transports the data to another client of the same SAP® system or
- transports the data to the same or a different client of another SAP® system

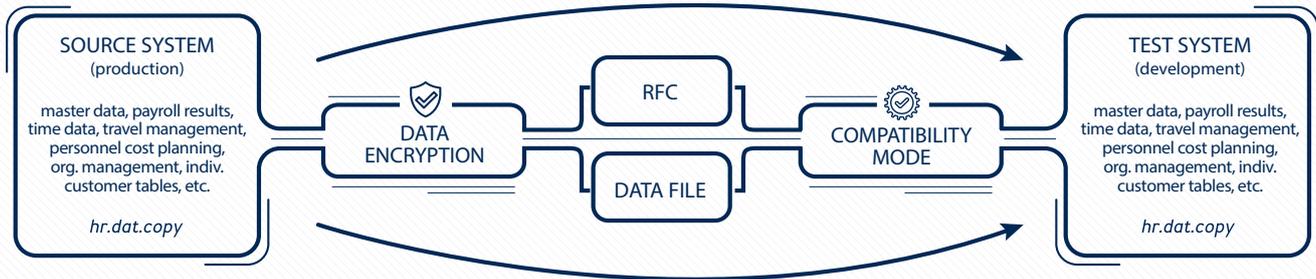

Availability

- System environment: SAP®-R3 for Releases 4.70, ECC 500, ECC 600 (incl. all EhPs), SAP S/4 HANA®
- Availability: independent
- Database system: independent
- Country version: independent
- Language: German, English, French

The complete tool is implemented in ABAP and supported by detailed documentation.

Schematic representation

Source system (e.g. production)

In the source system, the tables/clusters relevant in your system are created dynamically. Based on your specifications for personnel selection data anonymization and data selection. The program will select the data, anonymize them, if desired, and write them to an output file (e.g. the SAP® standard transport directory).

Target system (e.g. training)

In the target system, the program reads the data from the file and copies them into the relevant tables/clusters. Existing data are not affected or destroyed by this process. If required, the data can also be deleted completely or partially (e.g. prior to the update of existing people).

Your benefits

Realistic, up-to-date data

with a minimum of time and cost

GDPR-compliant

conform to GDPR by data anonymization

Protection

against unintended changes

Data summary

on multiple systems or clients

Data split

across multiple systems or clients

Short payback period

proven in many SAP®-installations

Transport of mass data

in the background with/without RFC connection

Rapid reacting

to mistakes in the payroll accounting

Customer-specific

infotypes are automatically identified & transported

Install and start immediately

Easy and fast installation

Immediate transport of data is possible

Easy handling

directly in the department

Detailed Protocols

ensure traceability
